Health & Environmental Control

Mary Srivastava

Master of Science candidate in
Population Health Sciences at
Duke University School of
Medicine

When: Jan 27, 2025 12:00 PM Eastern Time (US and
Canada)

Radon is the leading environmental cause of lung cancer in the United States. Surveys have revealed that radon is a health disparity issue. There are many efforts underway to increase awareness of radon among all populations. At this event, North Carolina and South Carolina radon programs will share how they are working to increase awareness in their States. Duke Cancer Institute will share information about their research which seeks to investigate climate impact on lung cancer via exposure to radon.

This event is sponsored by the Promising Interventions in Lung Cancer Disparities Work Group
